

HydroFLOW[®] S38

CHEMICAL-FREE LIMESCALE PROTECTION FOR SMALL BUSINESS

HYDROPATH Technology | The home of *HydroFLOW*[®]

HydroFLOW® s38

Limescale build-up in heating systems can cause blockages, necessitating replacement of equipment, decreasing heating efficiency and thereby increasing costs. Just 0.8 mm of limescale can decrease heating efficiency by as much as 10%*.

The HydroFLOW s38 is the solution for hard limescale deposits in your small business premises. More powerful than the domestic version, the hs38, the Hydroflow s38 is designed protect commercial heating systems, as well as appliances such as dishwashers and washing machines, and to make limescale-stained taps, sinks and surfaces easier to clean.

Unlike a water softener, the Hydroflow s38 does not chemically alter the water or remove minerals. Instead, it applies an electric field so that scale forms in suspension in the water, rather than as a hard encrustation on heating elements and pipe surfaces.

The HydroFLOW s38 fits easily around existing pipework on the cold feed to where the water is heated, for example on the inlet to a hot water cylinder or the inlet to a water heater.

SPECIFICATIONS

- Signal monitor light
- PSU: Input 110-240V AC
- Unit: Input 12V AC/DC
- Max power: 1.2 W
- Weight approx: 175grams
- Dimensions: H 110 x W 67 x D30mm
- Maximum pipe diameter 38mm OD
- Lead length 3m

*Effect of Scale Deposits in Boilers - Results of studies made by the University of Illinois and the US Bureau of Standards published in National Institute of Standards and Technology, Handbook 115, Supplement 1. UK Carbon Trust Technology Overview CTV008.

FROM COMBI BOILERS TO COOLING TOWERS

HydroFLOW units are working all over the world on multiple applications, treating carbonate and non-carbonate scaling and filtration issues in a wide variety of industries. Check out our website for more information.

- From homes to heavy industry
- From spas to steel mills
- Suitable for any pipe material
- From 15mm to 1500+mm OD pipe diameter
